# About Arcteq

- Founded in 2010 by group of experienced x-ABB ja x-Vamp professionals
- Head office in Vaasa, Finland, offices:
  - Stockholm - Sweden
  - Gdansk – Poland
  - Sao Paulo – Brazil
  - Shanghai – China
  - Seoul – South Korea
  - Tennessee - USA
- Sales network coverage in about 50 countries
- Arcteq focuses 100% in protection and smart grid business

# Made in Finland

- Research & Development – Vaasa, Finland
- Circuit board – Kyröskoski, Vaasa and Pietarsaari, Finland
- Assembly and testing – Vaasa, Finland
- Main office – Vaasa, Finland
- Ownership: Employees 80%, Ensto Oy 20%
  
- 93% Export in 2017

# Power, Electricity and Efficiency

## POWER PRODUCTION

Electrification and automation solutions for all power plants

## POWER DISTRIBUTION

Substations and equipment for transmission and distribution networks

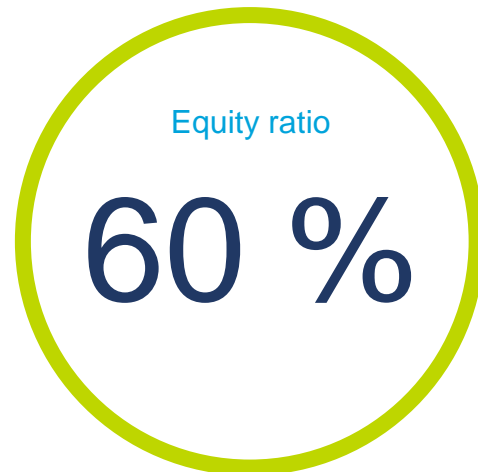

## ELECTRICITY IN USE

Electrification and automation for the process industry

**EXPERT SERVICES**

# VEO key figures

---

# Generator and Motor Commander

The first product in the world to integrate synchronous machine protection and control

- For about 1 - 250 MW brushless synchronous generators and motors (30A excitation at + 55 °C)
- The Generator Commander is ideal for any power plant or industrial application where both protection and control of generators or motors is needed
- Generator Commander replaces 4-5 units of traditional solution; one platform with one configuration & setting tool

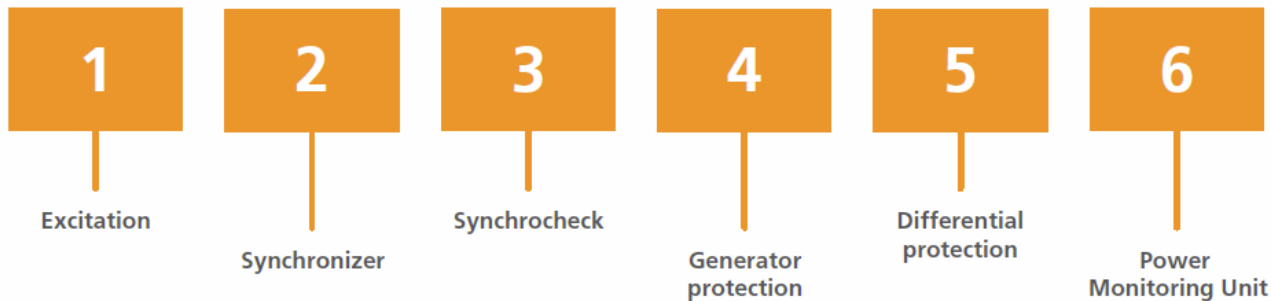

# Integrated system

## All in One

---

Traditional machine protection and control requiring up to 6 separate units.

- Excitation
- Synchronizer
- Synchrocheck
- Generator protection
- Differential protection
- Power Monitoring Unit

---

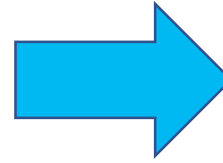

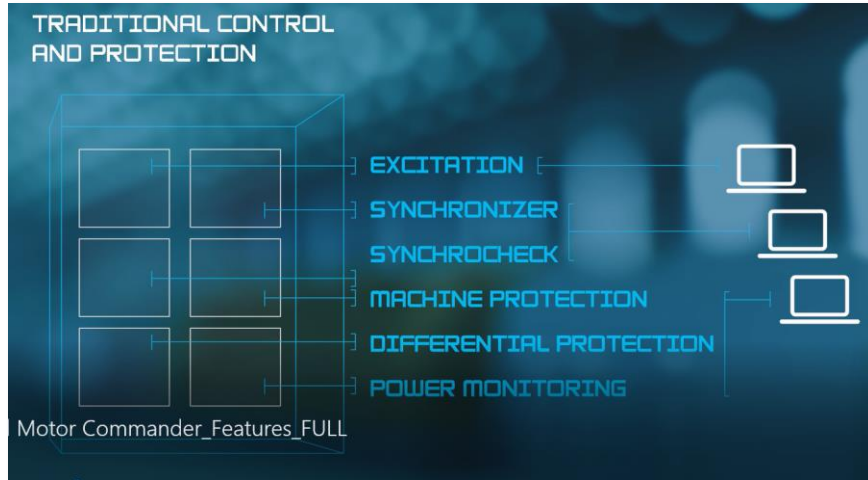

In the past all systems and even single protection functions were divided to separate units.

The Generator Commander does the same job with one unit

# The key figures once more

ARCTEQ GENERATOR & MOTOR COMMANDER

A photograph of the ARCTEQ Generator & Motor Commander unit. The unit is a black, rectangular device with a large color display screen and several physical buttons. The screen displays various technical data and a schematic diagram. The unit is labeled 'AQ-G217' in the top right corner.
