# What are the steps for regions worldwide to reach net zero?

The path is similar everywhere

# Energy storage capacity additions will again set a record in 2023

**Global grid-connected energy storage gross capacity additions by siting (MWac)**

**Gross capacity additions by region (% of MWac, 2015–30)**

**Gross capacity additions by technology (% of MWh, 2015–30)**

Gross capacity additions to reach 40 GW in 2023

# Flexibility solutions solve multiple grid issues

Grid reliability

Meeting demand for  
power 24/7

Renewables integration

Ensuring seamless  
integration of wind,  
solar & other renewable  
energy sources

System optimisation

Creating a flexible fleet  
of assets working in  
harmony

# Connecting energy assets to energy markets

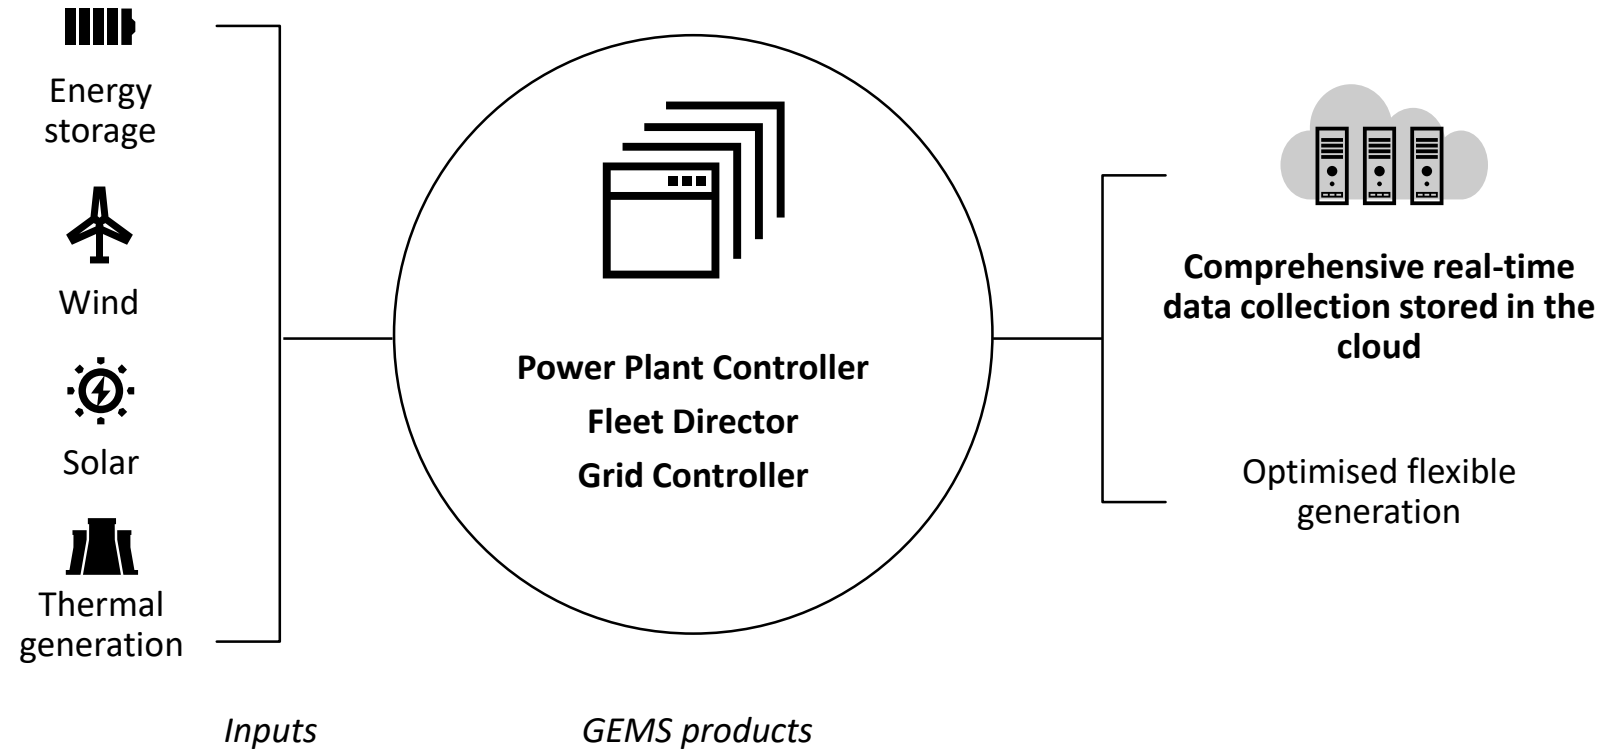

**Energy  
Assets**

**Energy  
Management  
System  
(EMS)**

**Energy  
Markets**

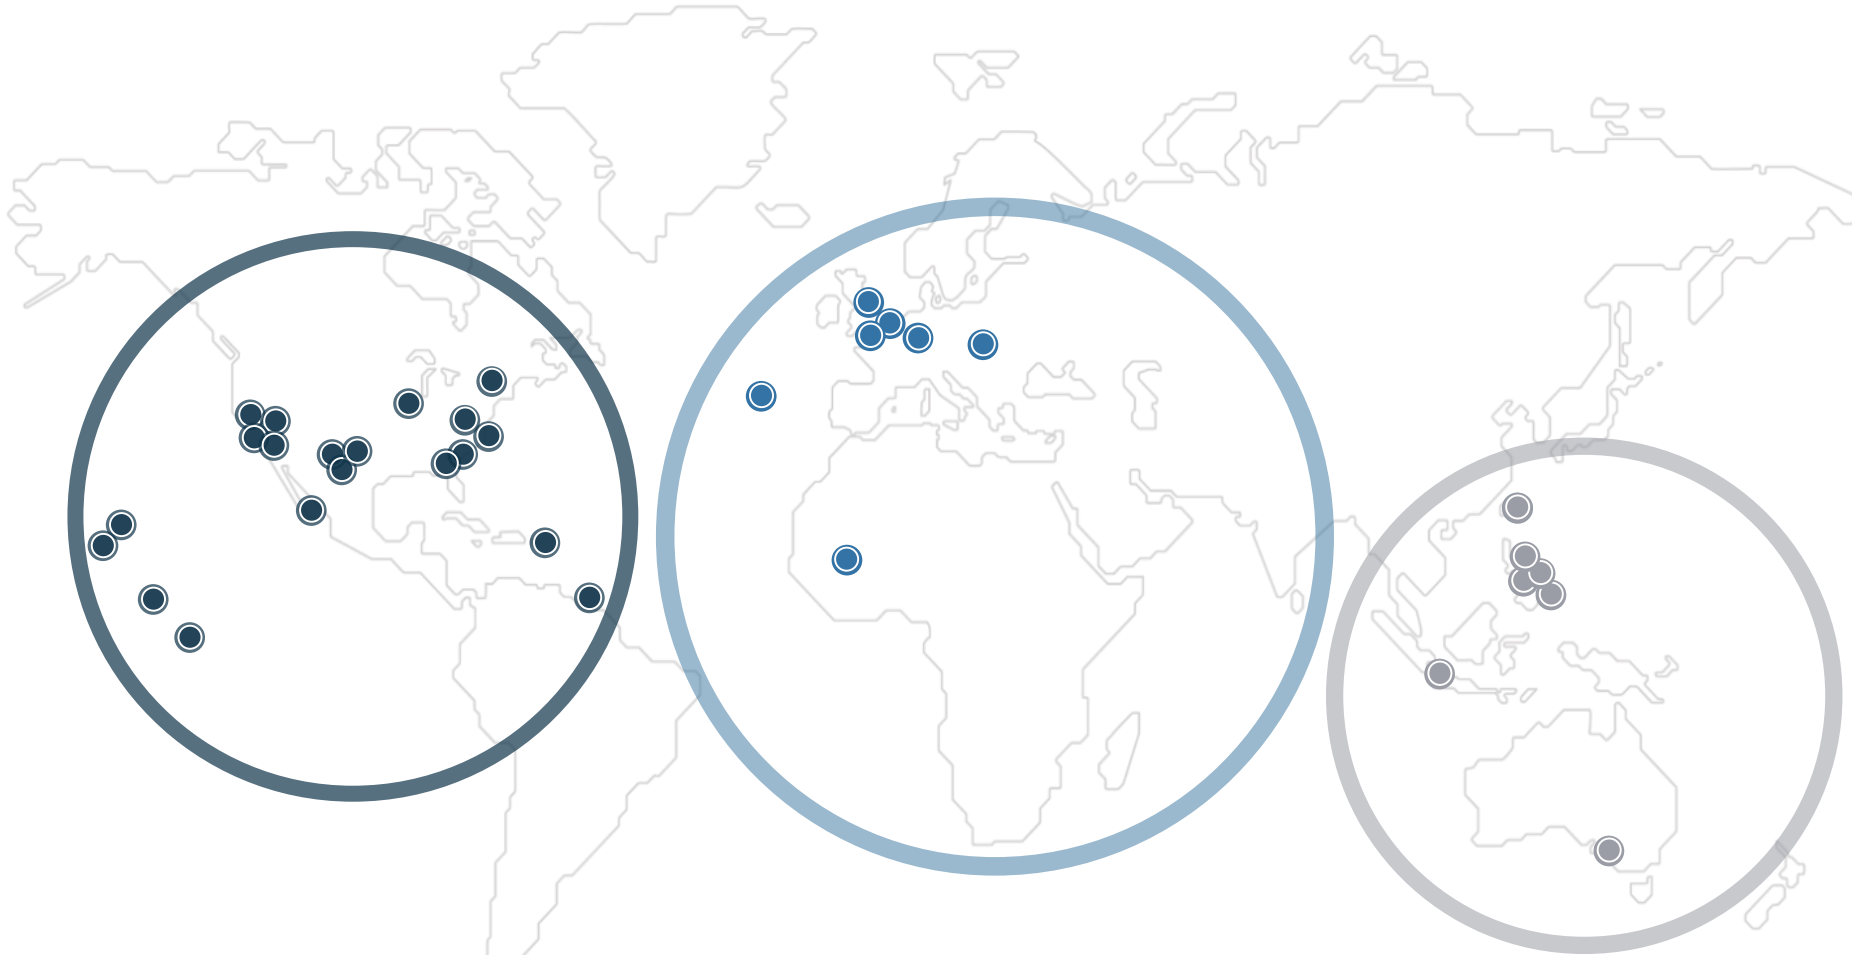

Flexibility solutions & EMS  
connect energy assets to energy  
markets in technically &  
economically optimised manners

# GEMS Digital Energy Platform

A suite of proprietary software products developed for building, monitoring and intelligently operating power plants and energy resources

# Wärtsilä's global portfolio

## AMER Region

Americas

1.8 GW+

4.3 GWh+

## AFEU Region

Africa, Europe

637 MW+

1.1 GWh+

## MEA Region

Middle East, Asia, Australia

526 MW

507 MWh

2.9 GW+  
5.8 GWh+

\*awarded, contracted, in deployment

GEMS Digital  
Energy Platform

15+ years  
development

110+ projects

## GIGA Storage

25 MW / 48 MWh

The storage system will **optimise the power system, regulate energy frequency & reliability** on the grid

The project will also make **operations more sustainable & integrate more renewables** onto the grid

The storage technology will store the equivalent of the annual energy consumption of more than **9,000 households** each year

Nippon Koei Energy Europe B.V.

25 MW / 100 MWh

The system will help to **regulate fluctuations & supply peak power** with stored **renewable energy** in the grid

The **GEMS Digital Energy Platform** will ensure **optimal performance** for the energy supply across specified use-cases – including reserve power, frequency control response, capacity dispatch & voltage support

## EDF Renewables UK & Ireland

2 x 50 MW / 50 MWh

2 x 50 MW / 100 MWh

1 x 50 MW / 100 MWh

The projects contribute to **greater UK National Grid stability & flexibility**—improving route to market for clean power solutions & reducing carbon footprints

Ensuring **clean, affordable & secure electricity supply** when **more renewables** are integrated to the grid

Providing additional power capacity to **support the installation of electric vehicle (EV) charging networks** designed to accelerate the electric transport transition

## Zenobē

200 MW / 400 MWh

One of the first projects in the world to deliver **stability services using a transmission-connected battery** & the first to be delivered under **National Grid's NOA Stability Pathfinder programme**

Assist grid operators in the management of challenges related to **balancing supply and demand, power stability & constraints**

Will provide stability services to the National Grid Electricity System Operator (NGESO) including **short-circuit level & inertia**

# The future grid

### Conventional Generator

### Virtual Generator

**Versatile inverter platform with virtual generator functionality**

## e-mesh Control System

- A Control System which can control all assets in the edge of the grid, to enable safe and **reliable integration**

## PowerStore Battery System

- **Modular and upgradeable BESS** offering, which can be customized to all applications and industry needs.

Compact solution  
up to 1MW

Outdoor Battery  
Rack solution 1-  
300MW

Containerized solution  
1-100MW

# Finland: 90MW BESS

Finnish Utility **TVO** is building a 1.6 GW Nuclear Power Plant “OL3” in Finland. TSO in Finland Fingrid requires approx. 300 MW System Protection assets in combination with the “OL3” Powerplant. Very fast responding BESS (0-90MW in 200ms) is required to support the grid in case an unexpected power dropout from the Nuclear Powerplant.

## About the project

- **Project name:** TVO 90MW BESS
- **Location:** Olkiluoto – Finland
- **Customer:** TVO
- **Completion date:** 2023
- One of the largest BESS in Europe and by far the largest BESS in the Nordic region

## Customer benefits

- Enables the 1.6 GW Powerplant to operate at 100% output power in combination with several Demand Response Assets:
  - BESS
  - Gas Turbines
  - Industrial plants
- Reserve Market participation
- Blacks start (option)

## Solution

- Nuclear Power Plant (1.6 GW)
- **PowerStore** Battery (90 MW / 85 MWh)
- **e-mesh** Control System
- **e-mesh** SCADA
- **e-mesh** Monitor
- **Lifecycle** services

# AUTOCIRC

We lead the automotive parts industry to a sustainable future.

## VISION

We want to achieve a sustainable future for our planet by promoting the use of reused car parts, both as spare parts and for us in new manufacturing.

## MISSION

Starting up and running automotive aftermarket companies that focus wholeheartedly on reuse and recycling of car parts. It contributes to a circular economy and our goal is to be the European leader in this area by 2025.

## HOW

We want to be a strong and sustainable alternative in an industry that has traditionally focused on new production. Through our solutions and our circular business model, **we link the value chain** and improve everyday life for our customers and society at large. Our mission is to make the second-hand market the first choice.

**autocirc**

# OUR COMPANIES.

February 2023

## DISMANTLERS:

Alingsås Bildelar AB (SE)  
Autodemontering TT AB (SE)  
Autopalsta OY (FI)  
Osamyynti AF OY (FI)  
Autoverwertung GmbH Kerstingjöhanner (DE)  
Bildelslagret i Lidköping AB (SE)  
Bildelslagret i Trollhättan AB (SE)  
Erikssons Verkstad AB (FI)  
Frykmalm i Karlstad AB (SE)

Kungsåra Bildemontering AB (SE)  
Magnus bildemontering AB (SE)  
Norrbottnens Bildemontering AB (SE)  
Redox Bildelar AB (SE)  
Riihimäen OY (FI)  
Skjeberg Biloppfuggeri AS (NO)  
Svensk Bilåtervinning AB (SE)  
Svenssons Bildemontering AB (SE)  
Trondheim Bil-Demontering AS (NO)  
Tröndelag Bildeler AS (NO)  
Vimmerby Bildemontering AB (SE)  
Växjö Bildemontering AB (SE)

## DISMANTLERS:

Beck Export Automobile (FR)  
Coram Auto SAS (FR)  
Bergen Bildemontering (NO)  
Ådalens Bildelar (SE)  
Delehuset (NO)

## REMANUFACTURERS:

Nordic Motor Center AB (SE)  
Styrdon i Sverige AB (SE)  
UBD Cleantech AB (SE)

## SCRAP & METAL:

Rewinner AB (SE)

## CORE TRADERS:

Premier Components UK LTD (UK)

## RIMS & TYRES:

Redox Miljöhantering AB (SE)

## WORKSHOPS:

Bil & Skadeservice AB Berga (SE)  
Bil & Skadeservice AB Helsingborg (SE)  
Bil & Skadeservice AB Lund (SE)  
Bil & Skadeservice AB Munka-Ljungby (SE)  
Bil & Skadeservice AB Klippan (SE)  
Erikssons Verkstad AB (FI)  
Mickes Lackservice i Perstorp AB (SE)

## VEHICLE TRANSPORT & TOWING:

Erikssons Bilbärgning AB (FI)  
Bergen Bilhjelp AS (NO)  
Voss Bilbergning AS (NO)

# WE ARE THE PLATFORM IN A CIRCULAR CONCEPT.

Together with several independent operators, we minimize waste and provide the car parts market with a stable flow of durable spare parts.

**By creating a network that reuses and extends the life of used car parts,** we can ensure sustainable options throughout the life cycle of the car.

The network consists of companies in dismantling, remanufacturing, scrap & metal, tires & rims, core traders and workshops. **All companies are independent and profitable.** By being integrated into Autocirc's circular business model, the actors create increased value.

This leads to:

- **More recycled car parts => higher insertion rate**
- **Renovation of more parts => higher insertion rate**
- **Recycling of residual material => production of secondary raw material**

Also increases the goal fulfillment of EU Directive 2000/53/EC which aims to increase the reuse of car parts.

**autocirc**

# AUTOCIRC CONTRIBUTES TO THE UN SUSTAINABLE DEVELOPMENT GOALS.

- Our concept aims to improve circularity within the automotive parts industry.
- Goal 12: By 2030, substantially reduce waste generation through prevention, reduction, recycling and reuse.
- Goal 13: Climate action by simplifying, facilitating and informing each car owner of their options and choosing reusing over the purchase of new parts, we help reduce greenhouse gas emissions.
- Today, there is still limited trade between countries, fragmented markets and very little transparency about inventories.

We work for a future where:

- Cross-border integration and trade that balances need and demand.
- Consolidated flow between companies in dismantling and frame trade.
- A platform for trading frames and spare parts.
- A common virtual warehouse with full transparency.

[Click here](#) to download our annual and sustainability report.

**autocirc**

# AUTOCIRC – PART OF SOMETHING GREATER.

## **REUSE**

Directly reusing entire car parts is the best for both the environment and the economy. We ensure that the parts are defect-free before they are reintroduced to the market.

## **REMANUFACTURING**

Broken parts that are needed on the spare parts market are refurbished and restored to new condition. Creating increased sustainability in more demanded parts is the core of the circular economy.

## **REPURPOSE**

Even the parts that are not needed on the spare parts market are reintroduced on the market, then for a new purpose than the original one. For example, batteries can be used to store energy.

## **RECYCLE**

The material that then remains is split into as many clean fractions as possible, to then be recycled and turned into new, durable car parts in the aftermarket.

**A SECONDHAND MARKET  
AS THE FIRST CHOICE.**

VERY  
ART  
COUNTS  
autocirc.com

Autocirc Battery Recycling AB

# autocirc

Building energy storages entirely on second-life batteries and uses also as much recycled materials as possible

# autocirc

our vision:

To reuse the already existing "scrap" batteries, by developing an efficient circular model for them. In doing so, we help to minimize the use of the earth's scarce and valuable resources.

Autocirc Battery Recycling Finland Oy

**autocirc**

# CURRENT SITUATION

The average lifespan of a passenger car is approx. 18 years

The average age of a damaged vehicle is approx. 5 years

We lose 13 years of battery life when an electric or hybrid vehicle is dismantled if the battery is not "actively" used \*

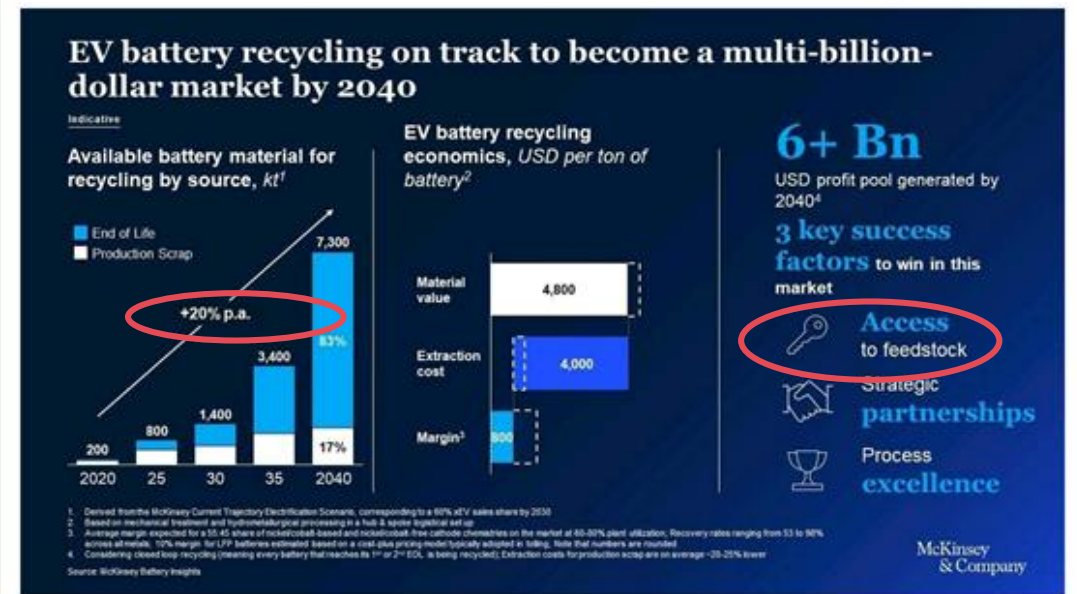

\* the charging capacity of a li-ion battery deteriorates quickly if it is just stored without use and it can be destroyed in a couple of years.

**autocirc**

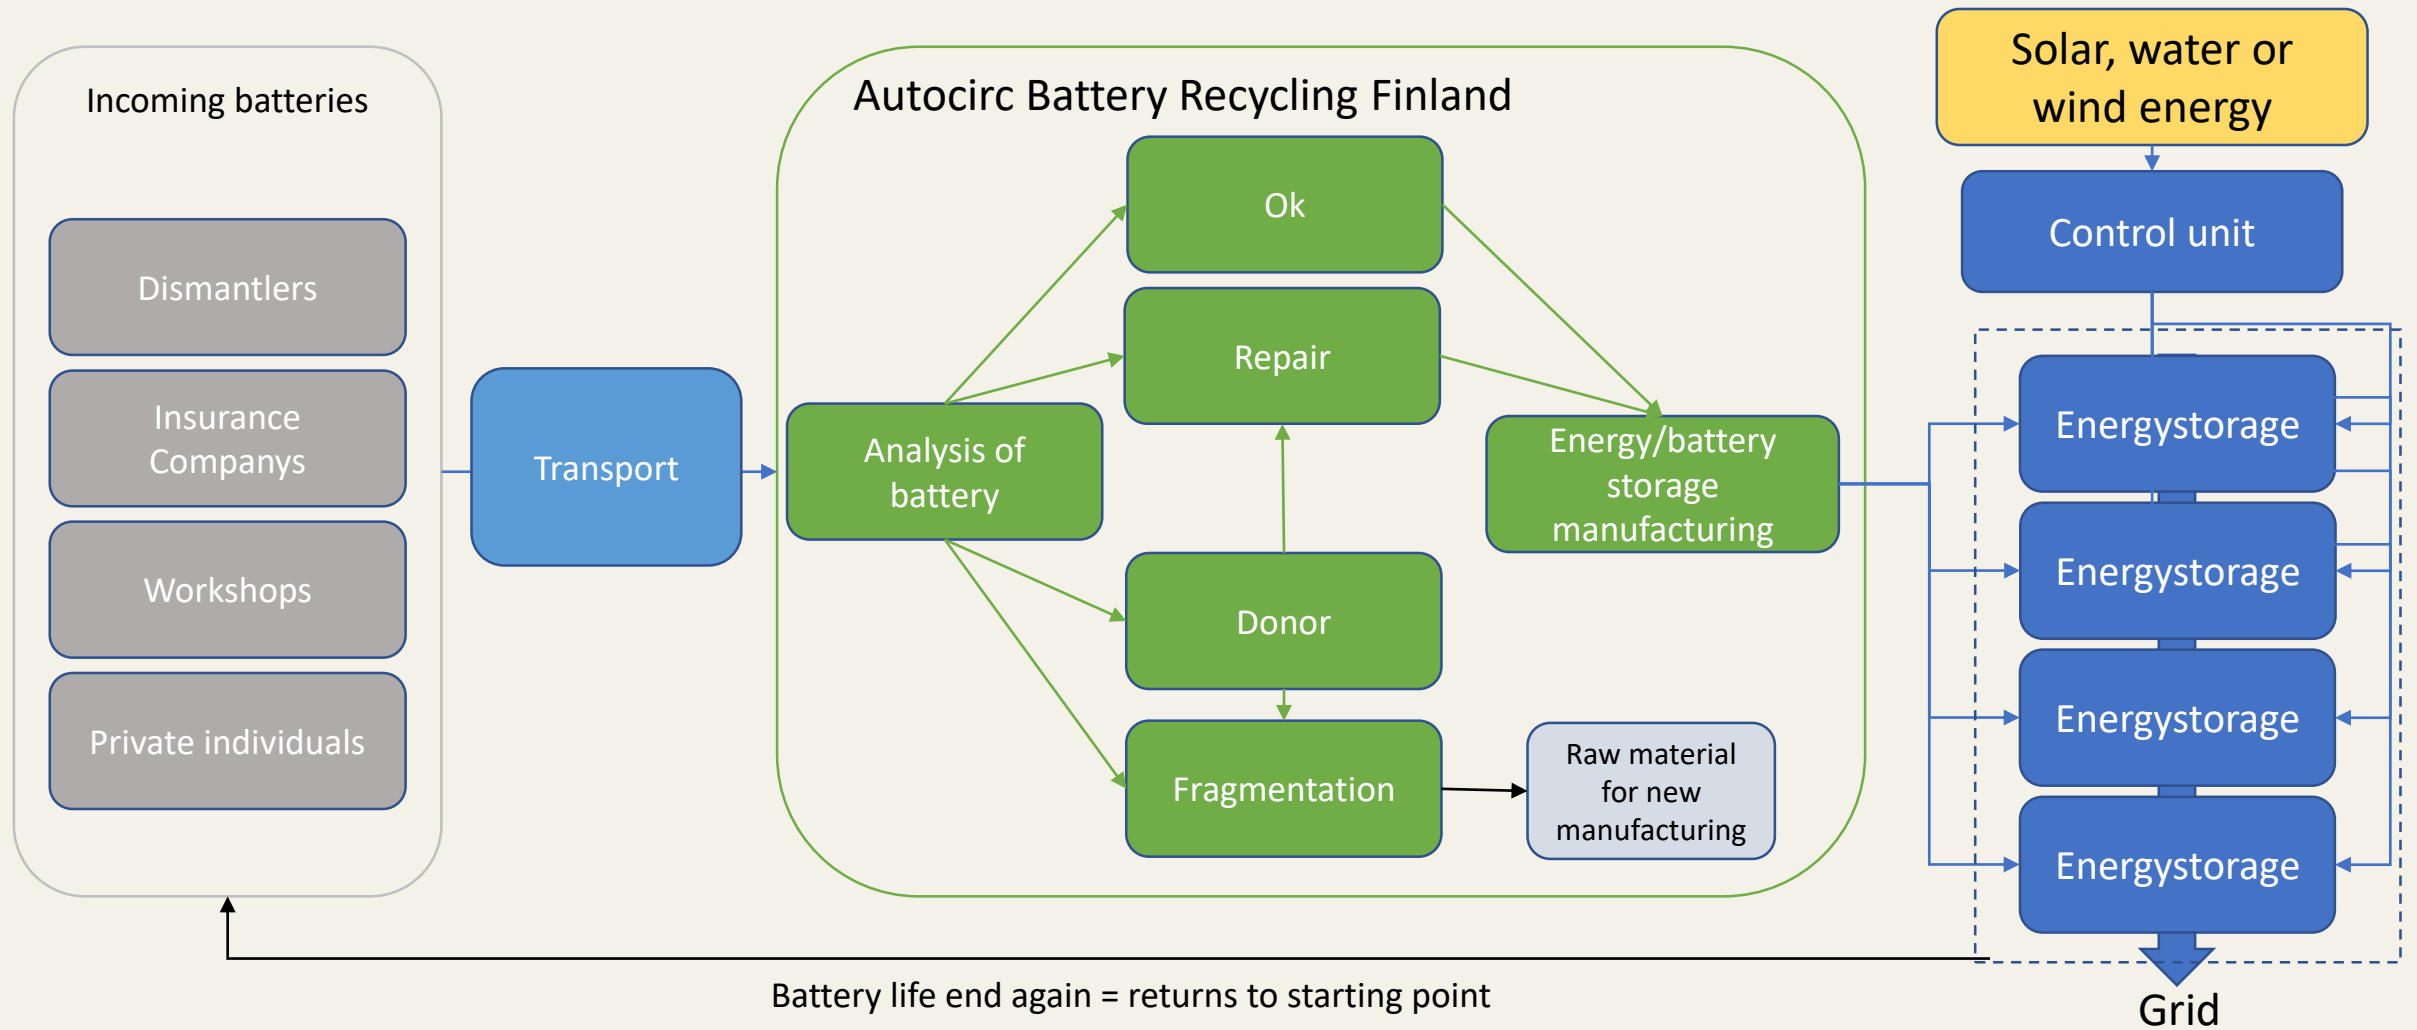

# Development and availability of electric cars and recyclable batteries

# Battery recycling, logic and process

# Environmental impact

- Manufacturing a new battery produces emissions ~2842 kg CO<sub>2</sub>e (100kWh)
- If the useful life is 18 years = 157kg CO<sub>2</sub>e/year
- In Finland, approx. 17,000 cars are redeemed/year, the average age of which is approx. 5 years
- Of which approx. 50% contains a lithium battery in 2027 -> 8500 batteries
- The average size of the battery is approx. 30kWh, the production of which produces  $2842 * 0.33 = 950$  kg CO<sub>2</sub>
- If these are not used, we will produce  $950\text{kgCO}_2 * 8500\text{pcs} = \mathbf{8,075,000}$  kgCO<sub>2</sub> unnecessary emissions per year 2027
- With our concept, by reusing used batteries, we can save a very significant amount of CO<sub>2</sub> emissions

# Goals for 2023

- Complete the new spaces
- Complete energy storages with a capacity of a total of 3 MWh
- Available on at least the Finnish and Swedish markets
- Investigate the opportunities/market in Norway (Europe in 2024)
- Prepare for "series production" in 2024

autocirc

### Execution excellence relies on:

- Global team of execution professionals
- Systematic execution of processes and practices providing reliable project delivery
- Owned manufacturing shops and large chain of partners and vendors delivering high quality, in global supply chain
- Extensive knowledge to apply all necessary international and local standards
- State of the art project execution and engineering tools

# Agenda

Long Duration Energy Storage	5
Liquid Air Energy Storage	9
Case study – Decarbonizing the power grid using LAES	12

# Long Duration Energy Storage (LDES)

# Why Long Duration Energy Storage

## Key challenges while decarbonizing the power grid

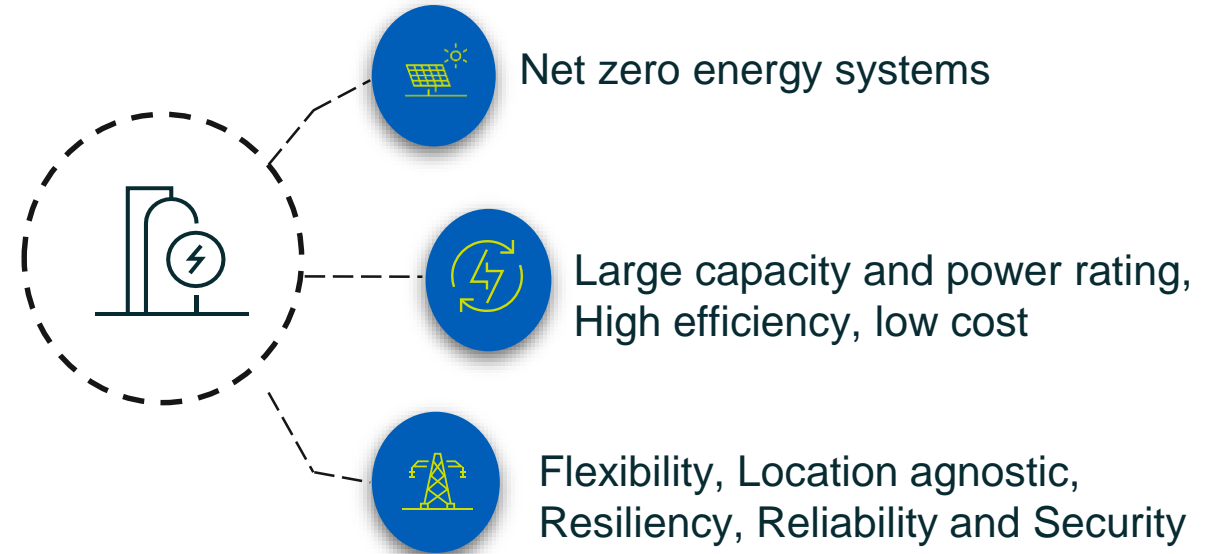

Demand-supply imbalances

Changes in transmission flow patterns

Decrease in system inertia

System reliability

Need for innovative storage solutions with technical characteristics suitable for operation in different segments of the power grid

Only possible with Long Duration Energy Storage (LDES)

# Energy Storage – Forecast upgrades continue despite supply chain issues

2022 deployments 17GW, growing to 30GW in 2023

- Forecast upgraded +17% (+56GW) vs. prior forecast from Sep-22
- 40% of 2022 projects delayed due to grid connection delays and long component lead times
- Average duration from below 2h in 2020 to 3.1h in 2030
- Main forecast changes:
  - China (+43GW) – policy mandates & provincial targets
  - Australia (+6GW) – Tenders & objectives
  - UK (+5GW) – Lucrative ancillary services drive project pipeline
  - Canada (+5GW) – Regulatory proposals have driven pipeline
  - USA (-14GW) – Grid connection delays and supply chain issues

# LDES becomes more feasible than Li-ion for durations >6-8 hours

>8 hours duration,  
due to low energy  
capex, LDES offers  
lower LCOS

## 2030 energy storage LCOS competitiveness by duration for selected technologies (USD/MWh)

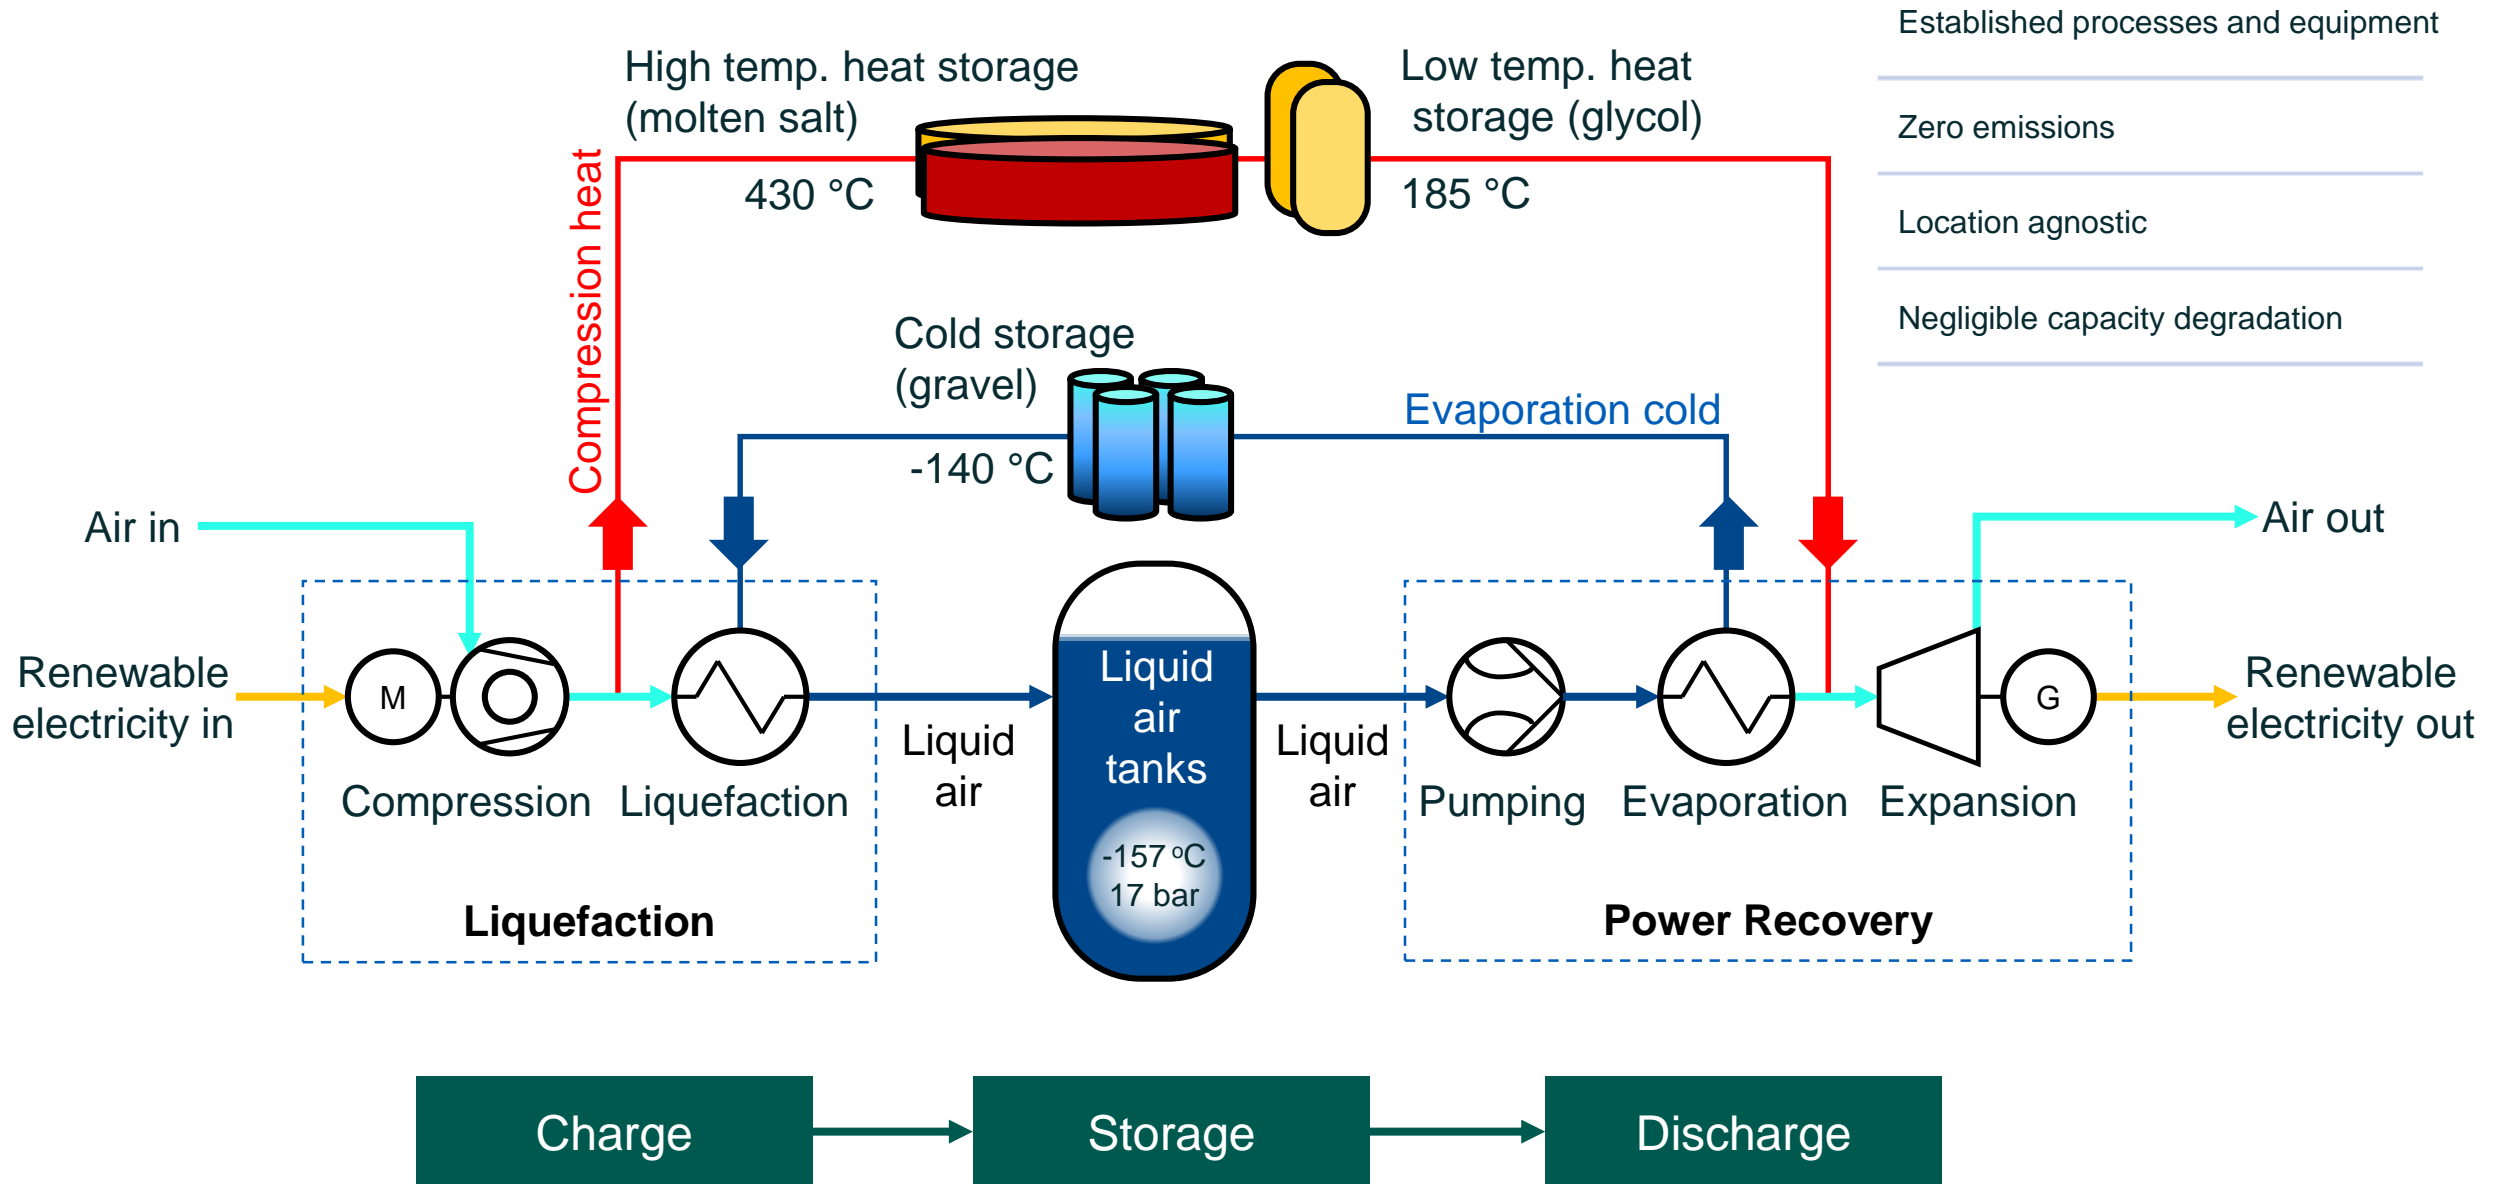

Source: LDES Council member technology benchmarking

# The Liquid Air Energy Storage (LAES) technology

# Liquid Air Energy Storage (LAES) Schematic

# 100% carbon free electricity – always!

LAES systems provide crucial services for the power grid and support electrification of rural areas in a sustainable way

## Energy Shifting

- Intra-day
- Inter-day
- Weekly storage

## Net zero eco system

- Integration with external sources of heat or cold such as LNG plants
- Waste heat from liquefaction to other industries, for example district heating

## Grid services

- Rotational inertia
- Frequency support
- Voltage support
- Reactive power
- Spinning reserve

## Isolated systems

- Decarbonizing smelting operations
- Reducing fuel consumption
- Enhancing security of energy supply

## Flexible deployment

- Decoupled charging and discharging power
- Customized long energy duration
- Location agnostic

## Future proofed asset

- Lifetime >30 years
- Negligible capacity degradation
- Highly scalable
- End of life recycling
- Circular economy
- Low supply chain risks

LAES is a scalable, ultra-flexible, location agnostic long duration energy storage system

# Case Studies

Decarbonizing the power grid using LAES

# Capacity expansion in the Cyprus power grid between 2021-2030

Yearly Capacity Expansion 2021-2030

Installed Capacity 2021-2030

- Capacity expansion results show that the LAES has a role to play in the energy transition
- The overall levels of curtailment would probably increase once the transmission network is taken into consideration - increased role for the LAES
- Model can be provided with the option to increase the share of other storage technologies to provide more objective results

# Liquid air storage will provide significant benefits for the power system

LAES allows the system to better utilize renewable energy and maintain grid stability

Reduced CO<sub>2</sub> emissions

**-9.7%**

Increased utilisation of wind power

**8.0%**

Increased utilisation of solar power

**46.6%**

Reduced fuel consumption

**-17.3%**

## Generation & emissions

# Case study: Decarbonising captive industry in India

LAES allows captive industry in to switch to renewable energy

## Hedging against future price scenarios

PV capacity	<b>150 MW</b>
LAES discharge capacity	<b>25 MW</b>
LAES charge capacity	<b>100 MW</b>

### Banking scheme

Renewable energy can be fed into the grid at one time and withdrawn from the grid at another time without cost and still be considered renewable, i.e. the grid is responsible for the balancing the renewables.

### CUSTOMER

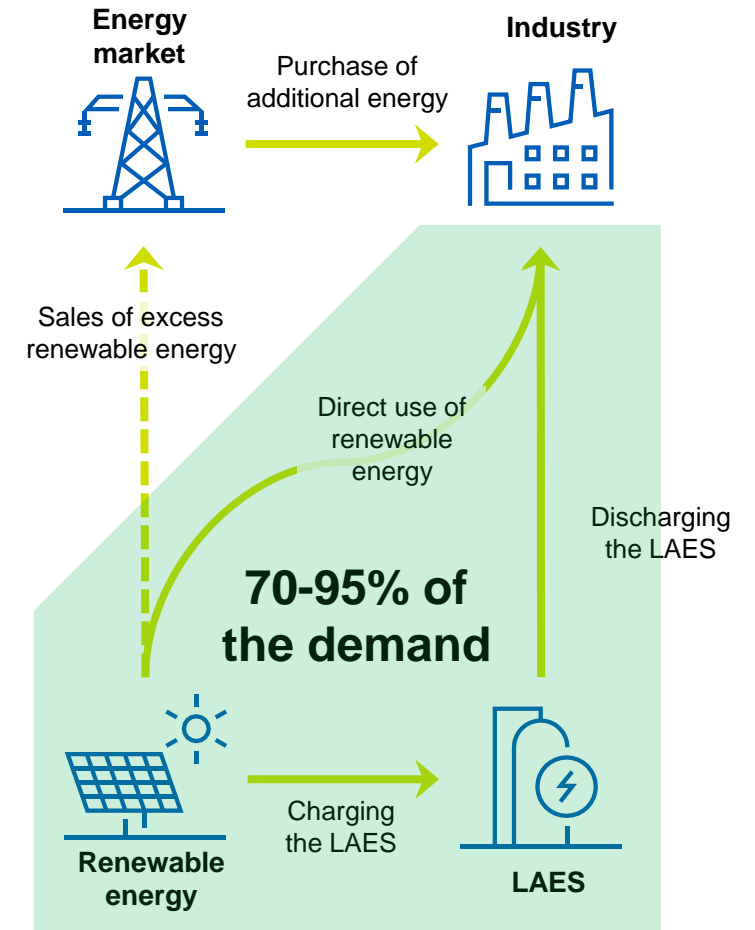

- Manufacturing industry in India
- 24/7 operation with stable load

### CURRENT ELECTRICITY SUPPLY

- Wind generation off site and transported through the grid
- Using "banking scheme" provided by the grid to achieve 80-90% renewable energy share

### FUTURE

- Banking scheme will disappear
- To decarbonise they are required to have access to hour-by-hour renewable energy

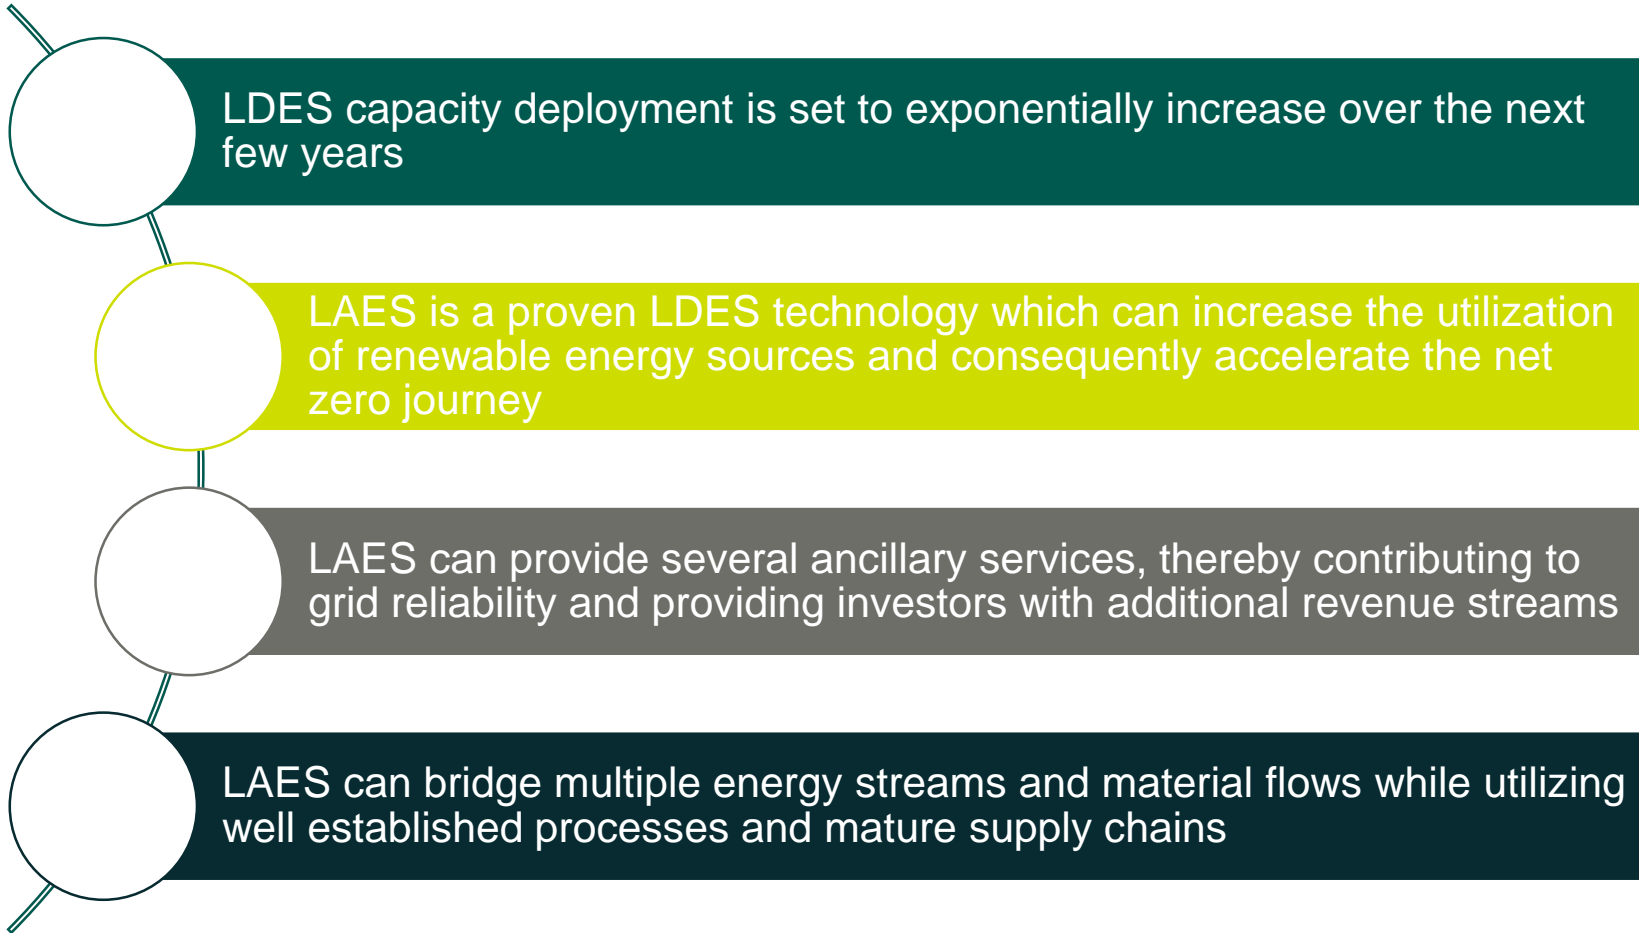

The levelized cost of electricity (LCOE) is linked to the desired share of renewable energy penetration

For **7 INR/kWh** an  
industry can be  
**70% renewable**

# Key Takeaways

## LAES – Bridge to a net zero ecosystem

# Thank you
